

CHECKLIST OF THE BIRDS OF ABACO

Tony White and Woody Bracey

This checklist includes all the birds found in the Abacos since 1950. Specifically the area covered by this checklist includes Great and Little Abaco, Moores Island, Gorda Cay, the cays east of Great Abaco (e.g. Man-o-War Cay, Elbow Cay, Great Guana Cay, and Green Turtle Cay), cays stretching north and west of Abaco to Walker's Cay, and off shore waters within 20 miles of land.

The common and scientific names of the birds and the sequence in which they are listed follow the American Ornithologists' Union Checklist of North American Birds, 7th Edition and supplements thereto. This may cause some confusion, as the "official" common names of some species are different from names often used in the Bahamas. For example we list the approved species name Cuban Parrot rather than the local names Bahama or Abaco Parrot. The sequence of bird families and species has also changed and many older field guides will use older sequences. We anticipate that new field guides will follow the latest sequence.

The entry for each species contains a letter or letters showing the status of the species and a number showing the species' abundance or rarity on Abaco. For example the notation WR 4 indicates that the species is a winter resident but only occurs irregularly. The status codes are defined as follows:

| | |
|----|--|
| PR | Permanent resident, present year round |
| SR | Summer resident, present mid-May to July or August |
| TR | Transient, migrates through Abaco but does not normally stay for a full season |
| WR | Winter Resident, present December to February |
| B | Breeds on Abaco or its associated cays |
| H | Hypothetical, credibly reported but further confirmation needed |
| I | Introduced species, not indigenous to the Bahamas or the New World |
| V | Vagrant, outside normal range, fewer than five records for Abaco |
| X | Extirpated – no longer found on Abaco |

The numbers 1–6 that follow the letters are the American Birding Association Birding Codes modified to fit the abundance of the species on Abaco. The codes are:

| | |
|---|---|
| 1 | Common (widespread and numerous) |
| 2 | Uncommon (confined range and locally numerous) |
| 3 | Rare (rare non-breeding visitors and very local breeding residents) |
| 4 | Casual (reported irregularly) |
| 5 | Accidental (outside normal range, fewer than five records) |
| 6 | Cannot be found at the present time, either extinct or extirpated. |
